

Experiment :- 2.3

Student Name : Aditya Sivam Kashyap

UID: 23BCC70036

Branch : CSE (Cloud Computing)

Section/Group: 23BCC-1 (A)

Semester : 6th

Date of Performance: 16/0/2026

Subject Name : Building & Release Management

Subject Code : 23CSH-395

1. **Aim/Overview of the practical:**

To perform file editing, staging, committing, and pushing operations using GitHub Desktop in order to maintain proper version history and systematically track changes in a repository.

2. **Steps for Experiment/practical:**

- Fork an existing GitHub repository.
- Clone the forked repository locally.
- Make changes in the local copy.
- Commit and push changes to your fork.
- Configure upstream repository.
- Synchronize fork with upstream repository.
- Understand the relationship between fork and parent repository

3. **Learning outcomes:**

- Navigate between original and forked repositories.
- Clone forked repository locally.
- Configure upstream repository.
- Sync fork with central repository.
- Understand distributed open-source workflows.
- Contribute changes using Pull Requests

4. **Result:** **This program has been successfully executed.**

5. Output:

 Spoon-Knife Public

README

Well hello there!

This repository is meant to provide an example for *forking* a repository on GitHub.

Creating a *fork* is producing a personal copy of someone else's project. Forks act as a sort of bridge between the original repository and your personal copy. You can submit *Pull Requests* to help make other people's projects better by offering your changes up to the original project. Forking is at the core of social coding at GitHub.

After forking this repository, you can make some changes to the project, and submit [a Pull Request](#) as practice.

For some more information on how to fork a repository, [check out our guide, "Forking Projects"](#). Thanks! ❤️

About

Create a new fork

A *fork* is a copy of a repository. Forking a repository allows you to freely experiment with changes without affecting the original project. [View existing forks.](#)

Required fields are marked with an asterisk (*).

Owner *

sundaysheep

Repository name *

Spoon-Knife

✔ Spoon-Knife is available.

By default, forks are named the same as their upstream repository. You can customize the name to distinguish it further.

Description

This repo is for demonstration purposes only.

45 / 350 characters

- ☒ Copy the `main` branch only
- Contribute back to octocat/Spoon-Knife by adding your own branch. [Learn more.](#)

 You are creating a fork in your personal account.

Create fork

```
adity@AdityaSKashyap MINGW64 ~/onedrive/desktop/CollegeCodeSem6/BRM-Exp2.3
$ git clone https://github.com/sundaysheep/Spoon-Knife.git
Cloning into 'Spoon-Knife'...
remote: Enumerating objects: 10, done.
remote: Total 10 (delta 0), reused 0 (delta 0), pack-reused 10 (from 1)
Receiving objects: 100% (10/10), done.
Resolving deltas: 100% (1/1), done.
```

```
adity@AdityaSKashyap MINGW64 ~/onedrive/desktop/CollegeCodeSem6/BRM-Exp2.3/Spoon-Knife (main)
$ git remote add upstream https://github.com/octocat/Spoon-Knife.git

adity@AdityaSKashyap MINGW64 ~/onedrive/desktop/CollegeCodeSem6/BRM-Exp2.3/Spoon-Knife (main)
$ git remote -v
origin https://github.com/sundaysheep/Spoon-Knife.git (fetch)
origin https://github.com/sundaysheep/Spoon-Knife.git (push)
upstream https://github.com/octocat/Spoon-Knife.git (fetch)
upstream https://github.com/octocat/Spoon-Knife.git (push)

adity@AdityaSKashyap MINGW64 ~/onedrive/desktop/CollegeCodeSem6/BRM-Exp2.3/Spoon-Knife (main)
$ git fetch upstream
remote: Enumerating objects: 6, done.
remote: Counting objects: 100% (2/2), done.
remote: Total 6 (delta 2), reused 2 (delta 2), pack-reused 4 (from 1)
Unpacking objects: 100% (6/6), 597 bytes | 18.00 KiB/s, done.
